

# A guide to Galay

Our books are released in the Galay Writing Script. Galay is a revolutionary new script that is both logographic and alphabetic. It can be easily learned and is suitable for ages 7+. Studies have shown that young logographic readers tend to develop a higher IQ and use additional parts of their brain to read. Each glyph is a word that is comprised of individually mapped letters or digraphs. The color of each letter or digraph determines its place in the order of the word.

Galay was first created and developed by Bethsheba Ashe in 2014, and the Galay Reading Library was created in 2020.

## HOW TO READ GALAY...

Each element of the Galay glyph is mapped to a letter of the alphabet or a common digraph. Therefore the first step towards reading Galay is to memorize the map:

When the alphabet is written out in Galay it looks like this:

A	B	C	D	E	F	G	H
I	J	K	L	M	N	O	P
Q	R	S	T	U	V	W	X
			Y	Z			

Letters are placed on top of one another to make the Galay word glyphs. When there are two or three instances of any letter, the letter appears either at a slight angle to the first one, or as a smaller dot:

The colors indicate the order of the letters of the word from red to purple, and for longer words the sequence repeats in paler shades:

The Fraternity of the Sanctum Regnum have developed a free online writing app & test to help the memorization phase.

# What makes Galay different from other logographic scripts?

Logographic scripts have thousands of word glyphs to memorize, so before you read a word you have to remember it, and therefore it can take more than a decade to properly read a logographic script. Whereas you can read Galay from the moment you can recall 26 spatial positions, which takes days - not years.

At this stage your reading will be slow because it is deductive reading. You are working out each word, one at a time. But keep reading and you'll progress to the next stage.

As you read deductively, your brain will try and remember the shape and color of the glyphs, so that you look at a glyph and know the word it represents automatically. At this stage your reading will become a little faster, and you'll find that you recognize all the 'small words' that make up the majority of any language. You'll also start to recall some larger words. Your reading will be a mixture of deductive reading and glyph recognition. Keep reading and you'll progress to the next stage.

Glyph recognition becomes automatic, and you'll build your vocabulary so you can recognize a large amount of characters automatically and without effort. You may resort to logographic reading for unfamiliar words, but you will also find it possible to look at whole lines know what it says. This is when you start to

benefit from a logographic writing script. Logographic reading is much faster!

You'll also be using a visual part of the brain more, so you might find you're better at solving spatial problems (which incidentally is part of the IQ test). Reading Galay is like a bench press for your mind. Keep reading and you'll be able to do something else...

For deductive reading Galay is in color, but when you're confidently reading logographically, you will be able to read the shadow script. These are the Galay glyphs written in black.

Our library is more than a simple repository of Galay books. It is a caretaker of the script itself. It is charged with the brief to develop the Galay script - to provide a number of fonts for the script - and better apps to generate Galay documents. We are also tasked with encouraging everyone to give Galay Reading a try. So we're going to invent the modern equivalent to the printing press, and release an app that allows you to convert documents and books to Galay.
